

In this challenge, the task is to debug the existing code to successfully execute all provided test files.

Given two strings consisting of digits 0 and 1 only, find the XOR of the two strings.

To know more about XOR [Click Here](#)

Debug the given function `strings_xor` to find the XOR of the two given strings appropriately.

Note: You can modify at most *three* lines in the given code and you cannot add or remove lines to the code.

To restore the original code in the editor, create a new buffer by clicking on the top left icon in the editor.

Input Format

The input consists of two lines. The first line of the input contains the first string, s , and the second line contains the second string, t .

Constraints

- $1 \leq |s| \leq 10^4$
- $|s| = |t|$

Output Format

Print the string obtained by the XOR of the two input strings in a single line.

Sample Input

```
10101
00101
```

Sample Output

```
10000
```

Explanation

The XOR of the two strings **10101** and **00101** is $1 \oplus 0, 0 \oplus 0, 1 \oplus 1, 0 \oplus 0, 1 \oplus 1 = 10000$.
