According to Wikipedia, a factory is simply an object that returns another object from some other method call, which is assumed to be "new".

In this problem, you are given an interface *Food*. There are two classes *Pizza* and *Cake* which implement the *Food* interface, and they both contain a method *getType*().

The main function in the Main class creates an instance of the FoodFactory class. The FoodFactory class contains a method getFood(String) that returns a new instance of Pizza or Cake according to its parameter.

You are given the partially completed code in the editor. Please complete the *FoodFactory* class.

Sample Input 1

cake

Sample Output 1

The factory returned class Cake Someone ordered a Dessert!

Sample Input 2

pizza

Sample Output 2

The factory returned class Pizza Someone ordered Fast Food!
