You are given a class *Solution* and its *main* method in the editor.
Your task is to create the class *Add* and the required methods so that the code prints the *sum of the numbers* passed to the function *add*.

Note: Your *add* method in the *Add* class must print the *sum* as given in the *Sample Output*

Input Format

There are six lines of input, each containing an integer.

Output Format

There will be only four lines of output. Each line contains the sum of the *integers* passed as the parameters to *add* in the *main* method.

Sample Input

```
1
2
3
4
5
6
```

Sample Output

```
1+2=3
1+2+3=6
1+2+3+4+5=15
1+2+3+4+5+6=21
```
